AT A GLANCE

The R&S®Spectrum Rider FPH is a versatile, user-friendly instrument with a rugged and appealing design. Most basic models have a unique keycode frequency extension concept. The analyzer supports a wide frequency range up to 44 GHz.

The R&S®Spectrum Rider FPH is designed for both indoor and outdoor field applications and use in labs. Large buttons and a multifunction rotary control allow operation even when wearing gloves. The backlit keypad makes the analyzer usable in the dark, and the bright nonreflecting display is readable in bright sunlight. The battery lasts an entire working day. The light weight, small form factor and ruggedness make the analyzer easy to carry. It is a reliable companion even in harsh and difficult-to-reach environments.

The fan-free design means the analyzer operates noise free, is clean and reliable since no dust or water can slip in through a vent guard.

The small form factor does not limit its performance or capabilities. The solid RF performance, short boot times and ease of use make the R&S®Spectrum Rider FPH ideal for spectrum measurements in the lab or in service applications.

The state-of-the-art touchscreen allows smartphone-like touch gestures. An on-screen keyboard and many other functions make the life of the user easier.

Key facts

- ▶ Frequency range from 5 kHz up to 44 GHz
- ▶ Tracking generator with frequency range from 30 kHz to 44 GHz (models .23/.36/.54)
- ▶ Frequency extensions via keycode
 - From 5 kHz down to 100 Hz (applicable to models .06/.13/.26/.23/.36/.44/.54, with R&S®FPH-B29 option installed)
 - From 2 GHz to 3 GHz or 4 GHz (model .02)
 - From 6 GHz to 8 GHz (model .06)
 - From 13.6 GHz to 20 GHz (models .13/.23)
 - From 26.5 GHz to 31 GHz (models .26/36)
- ▶ Spectrum analysis for e.g.
 - Mobile communications
 - Radar and satellite communications
 - Broadcasting
- ▶ Solid RF performance
 - DANL: typ. -163 dBm (10 MHz to 3 GHz, preamplifier on)
 - TOI measurement: $+10$ dBm ($f = 2.4$ GHz)
- ▶ Ideal for field use: > 6 hour battery life, ≥ 2.5 kg (5.5 lb.) weight, backlit keypad, fast boot time, nonreflective display, small footprint, ruggedized housing
- ▶ Large color display with touch and gesture operation
- ▶ Measurement wizard that supports measurement campaigns, speeds up measurements and avoids errors
- ▶ Features and options for various industries such as aerospace and defense, wireless communications, broadcasting, spectrum regulators and education
- ▶ Easy and cost-efficient upgrades of all options via software keycode
- ▶ 3 year warranty as standard (battery and accessories have 1 year warranty)

EXCELLENT IN THE FIELD

Lightweight, compact with long battery life

The low weight, small footprint, short boot time and longest battery life on the market make the R&S®Spectrum Rider FPH ideal for work in the field, even in remote, difficult-to-reach locations.

The R&S®Spectrum Rider FPH can operate an entire working day (over 6 hours) without recharging or replacing the battery. Depending on the model, the instrument plus battery weighs between 2.5 kg (5.5 lb) and 3.2 kg (7.1 lb).

Measurements in the field:

- ▶ Verify signal transmission (e.g. verifying 5G, broadcast, radar and satellite communications link)
- ▶ Spectrum checks, site surveys
- ▶ Interference hunting
- ▶ EMF measurements
- ▶ Microwave link alignments

Protected connectors and interfaces

Wide range of accessories

A soft carrying bag, battery charger, spare batteries and other accessories are available for work in the field.

Nonreflective display and backlit keypad for outdoor use

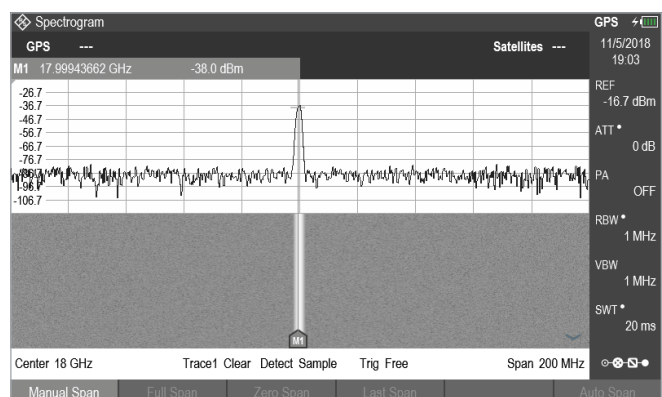

The 18 cm (7") display is nonreflective and shows measurement results, not the operator's reflection. Adjusting the brightness makes the display easy to view in outdoor environments. The black-and-white mode is readable even in bright sunlight. The keypad can be illuminated for convenient work in dim environments. Large buttons and a rotary knob with enter function make the instrument easy to operate even when wearing gloves.

Ruggedized in line with MIL-PRF-28800F class 2

The R&S®Spectrum Rider FPH has no vents or fans where dirt or water can penetrate. All interfaces and connectors are protected. The instrument is tested in line with the MIL-PRF-28800F class 2 mechanical test specification for work in rough environments. It is protected against dust and dripping water in line with the IP51 specification.

High-contrast black and white display mode enhances screen readability

EXCELLENT FOR LAB DIAGNOSTICS

Solid RF performance for diagnostics in the lab

Phase noise of -105 dBc (1 Hz) at 100 kHz offset from the carrier, total measurement uncertainty of 0.5 dB and high sensitivity (displayed average noise level (DANL) of typ. < -163 dBm (10 MHz to 3 GHz with preamplifier on) make the R&S®Spectrum Rider FPH a powerful and easy-to-use spectrum analyzer for RF diagnostics in service and development labs.

Examples of measurements in the lab:

- ▶ Frequency and amplitude of any RF device
- ▶ Accurate frequency readings with the frequency counter (to align frequency references)
- ▶ Measurement of spurious emissions
- ▶ Measurement of harmonics and intermodulation products
- ▶ Measurement of pulsed signals in the time domain

EMI debugging with optional near-field probes

The R&S®HZ-15/R&S®HZ-17 near-field probes are used as diagnostic tools for EMI debugging (on circuit boards, integrated circuits, cables and shielding). The near-field probe set is ideal for measuring emissions from 30 MHz to 3 GHz. The R&S®HZ-16 preamplifier improves measurement sensitivity up to 3 GHz, with approx. 20 dB gain and a 4.5 dB noise figure. In combination with the

R&S®Spectrum Rider FPH, the preamplifier and near-field probe can cost-effectively analyze and locate disturbance sources during development.

Scalar frequency response measurements

Models with tracking generators extend the analyzer capacity to include measurement of amplitude frequency characteristics for filters, amplifiers, attenuators and antennas. The tracking generator frequency ranges from 30 kHz to the relevant maximum frequency. Port output power can be adjusted in 1 dB steps.

There are three types of generator sources:

- ▶ Tracking: the output frequency is identical to the analyzed spectrum analyzer frequency
- ▶ CW (independent source): user-defined output frequency
- ▶ Coupled CW: the output frequency is coupled to the center frequency

USER-FRIENDLY

User friendly with smartphone-like touchscreen

The R&S®Spectrum Rider FPH is flexible and straightforward. It can be operated either with the 7" capacitive touchscreen or keys.

The unique capacitive touchscreen can adjust to the most common settings, such as center frequency, span and reference level, and manage markers with intuitive smartphone-like gestures.

The large keys and the rotary knob with enter function let the R&S®Spectrum Rider FPH be easily operated outdoors and even while wearing winter gloves. Dedicated softkeys and hardkeys are available for the most important settings such as frequency, span, amplitude, markers and limit lines.

The screenshot button makes it possible to save and document a graphics file with a single keystroke. A USB flash drive or a microSD card can store large amounts of data.

The user interface is available in 11 languages: English, German, Korean, Japanese, Chinese, Russian, Italian, Spanish, Portuguese, French and Hungarian. All these languages are also supported by the convenient on-screen keyboard.

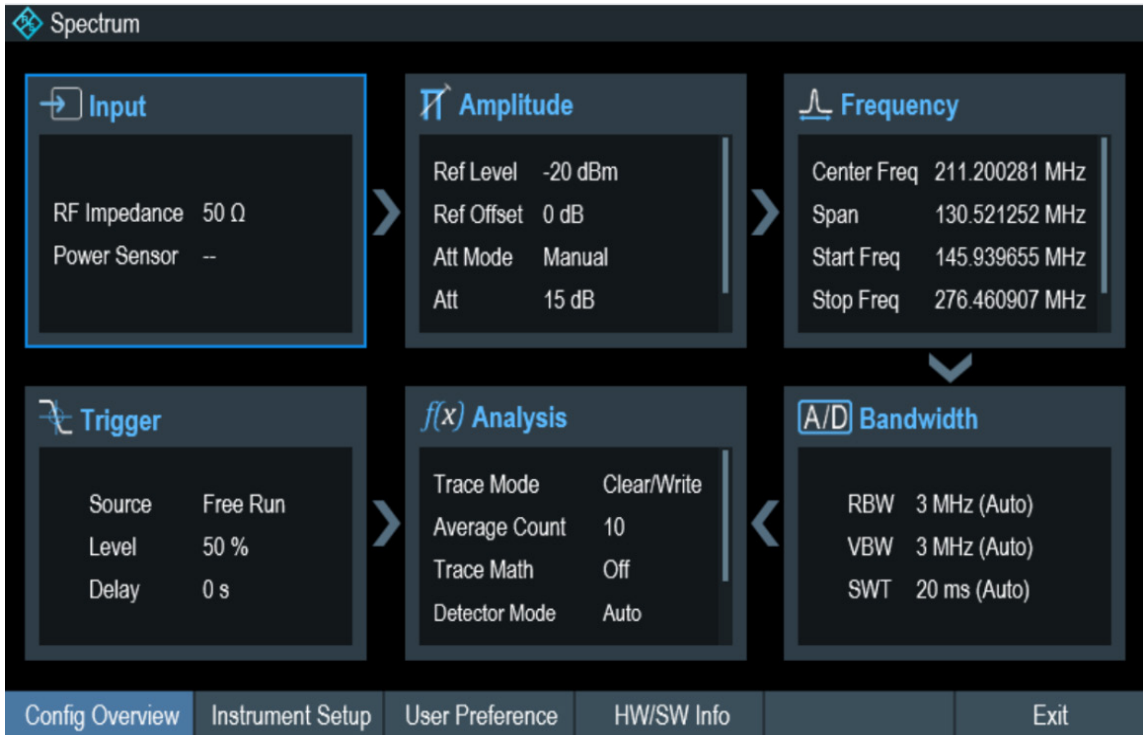

Configuration overview menu

The configuration overview menu makes it easy for the user to have an overview of the main measurement settings. The menu shows the flow of spectrum measurements at different receiver stages, along with the relevant parameters that impact the measurements at each stage.

Click on the configuration overview icon for quick access to the menu for checking and changing frequency, amplitude, bandwidth, etc.

Setting frequencies with channel tables

Users who prefer channel numbers to frequencies can use the predefined channel tables. The most common channel tables for wireless and broadcast systems come standard; users can also add their own channel tables.

OPERATING ELEMENTS

FUTURE-READY

Software-upgradeable frequency ranges

The R&S®Spectrum Rider FPH is the first handheld analyzer with frequency range software upgrade. The units handle frequencies between 5 kHz to 31 GHz. No down-time is needed for the upgrade and no recalibration is required after the upgrade. The frequency range can be extended as needed. The 26.5 GHz base model can be easily upgraded to 31 GHz with the R&S®FPH-B31 keycode option.

Multipurpose uses in industrial applications, R&D and education

The excellent price/performance ratio make the R&S®Spectrum Rider FPH attractive to field engineering companies, repair centers and development labs. The analyzer is also great for RF teaching labs in schools and universities.

The R&S®Spectrum Rider FPH comes with a wide range of standard features for everyday spectrum analysis, such as four spectrum traces, AM/FM audio demodulation, remote control and frequency counter. Field engineers and repair labs in various industries will find optional measurement applications for peak and average power measurements.

Field strength measurements are also possible by connecting to a directional or isotropic antenna.

Easy upgrade of all options via software keycode

All options can be easily added with a software keycode. This eliminates extra installation costs and turnaround times because the instrument does not need to be sent to a service center for calibration or alignment.

Software-upgradeable frequency ranges

R&S®Spectrum Rider FPH	Frequency range	Frequency range upgradable
Model .02	5 kHz to 2 GHz	up to 3 GHz (with R&S®FPH-B3 option), up to 4 GHz (with R&S®FPH-B3 and R&S®FPH-B4 options)
Model .06	5 kHz to 6 GHz	up to 8 GHz (with R&S®FPH-B8 option), from 5 kHz down to 100 Hz (with R&S®FPH-B29 option)
Models .13/.23 (with tracking generator)	5 kHz to 13.6 GHz	up to 20 GHz (with R&S®FPH-B20 option), from 5 kHz down to 100 Hz (with R&S®FPH-B29 option)
Models .26/.36 (with tracking generator)	5 kHz to 26.5 GHz	up to 31 GHz (with R&S®FPH-B31 option), from 5 kHz down to 100 Hz (with R&S®FPH-B29 option)
Models .44/.54 (with tracking generator)	5 kHz to 44 GHz	from 5 kHz down to 100 Hz (with R&S®FPH-B29 option)

Optional software applications

Power measurements with power sensors

Precision is needed when measuring and aligning transmitter levels and the R&S®FPH-K9 option lets the R&S®Spectrum Rider FPH be used for power measurements together with the R&S®NRP power sensor series. The setup has a measurement range of -70 dBm to +45 dBm and covers frequencies up to 110 GHz.

When combined with an R&S®HA-Z360/Z361 optical power sensor, the R&S®Spectrum Rider FPH power meter mode can display optical absolute power in dBm and relative power in dB.

Internal channel power meter

The R&S®FPH-K19 channel power meter option converts the R&S®Spectrum Rider FPH into a portable power meter with a level measurement accuracy of typ. 0.5 dB. The

option enables quick and easy power measurements without adding a power sensor or switching to spectrum analyzer mode. The option helps check power levels along the signal path of field transmitters or verify power levels for devices under test (DUT) in a lab.

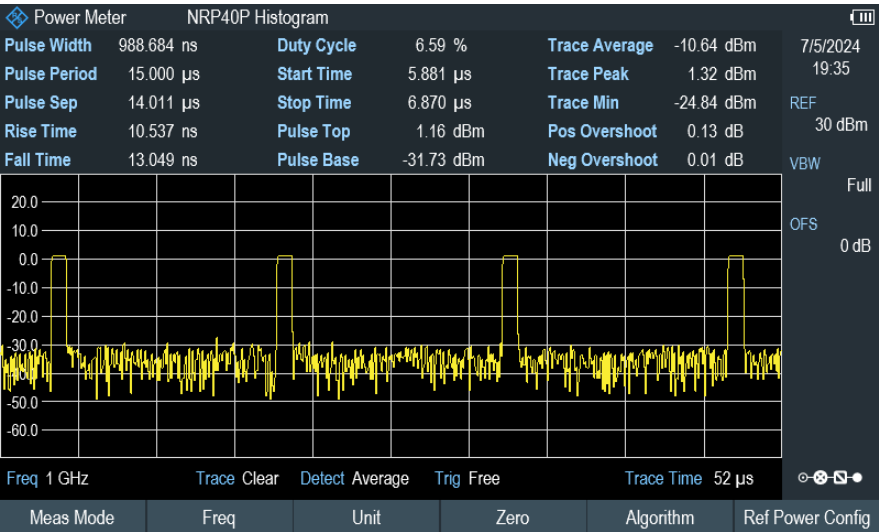

Pulse measurements with power sensors

The R&S®FPH-K29 option enables precise pulse and peak power measurements with the R&S®Spectrum Rider FPH and R&S®NRPxxP wideband power sensors, which measure pulses with a resolution of up to 50 ns and support from 18 GHz to 50 GHz.

The main pulse parameters such as pulse width, rise/fall time and duty cycle are displayed automatically. The trigger function and markers can zoom in on pulses by reducing trace times, which is convenient when installing and maintaining radar systems.

Optical power measurement screen (R&S®FPH-K9)

Pulse analysis with the R&S®FPH-K29 option and R&S®NRPxxP wideband power sensors or new R&S®NRPxxP series pulse power sensor

AM/FM analysis

The R&S®FPH-K7 option makes the R&S®Spectrum Rider FPH an analog modulation analyzer that can measure the quality of amplitude or frequency-modulated signals. The analog modulation display shows waveforms and measurement parameters such as carrier power, carrier offset and modulation index (depth) for AM signals, frequency deviation for FM signals, SINAD and THD. The modulation summary has user-definable limits for each measurement.

Interference analysis and signal strength mapping

The R&S®FPH-K15 interference analysis and R&S®FPH-K16 signal strength mapping options help analyze and locate ambiguous signals or interferers. When analyzing, a long-time spectrogram recording can capture up to 999 hours of on-air activity; the recording time depends on the interval setting. The recorded data can be analyzed on the device or with R&S®InstrumentView. Signal strength mapping depicts signal power levels on an indoor or outdoor map. The color indicator provides a good estimation of signal coverage for a particular area or the most likely location of the interferer or intended signal.

Receiver mode

The R&S®FPH-K43 receiver mode option enables EMI diagnostics with weighted detectors such as the quasi-peak detector. Measurements are performed at predefined frequencies for adjustable measurement times.

Advanced gated trigger measurements

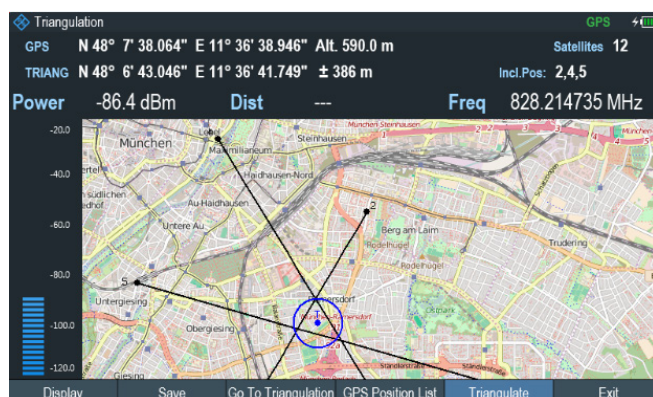

In spectrum analyzer mode (including channel power and spectrogram modes), the R&S®Spectrum Rider FPH has a gated trigger function. The gated trigger helps display weak uplink signals normally buried by strong downlink signals in TDD networks.

The R&S®FPH-K57 advanced gated trigger measurements option includes occupied bandwidth (OBW), adjacent channel leakage ratio (ACLR) and spectrum emission mask (SEM) measurement modes. The standard gated trigger and new advanced gated trigger measurement options help assess network quality and easily identify interferers.

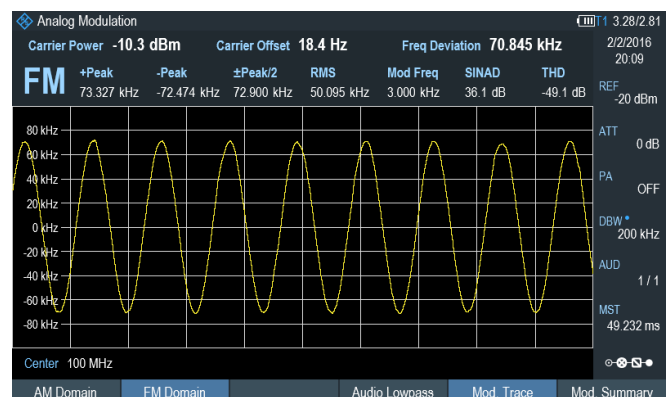

EMF measurement application

The R&S®FPH-K105 option supports automated test sequences for frequency selective measurements. R&S®InstrumentView software conveniently configures such measurements. The configuration setup covers one or several sub-measurements on various frequencies or channels and can include EMF emission limits in line with national and international standards during configuration or after measurement for a quick overview of transmitter system compliance with safety exposure limits. Pre-configuration can be done in a lab to save time. All test sequences are executed automatically with just a few clicks. The results can be previewed on the analyzer or with R&S®InstrumentView to analyze and document them.

Standard features

- ▶ Four spectrum traces
- ▶ Six markers, absolute or relative
- ▶ Noise marker
- ▶ Frequency counter with 0.1 Hz resolution
- ▶ AM/FM audio demodulator (audio via built-in loudspeaker or headphones)
- ▶ Limit line monitoring (pass/fail function)
- ▶ Remote control via USB/LAN interface
- ▶ Predefined channel tables
- ▶ Measurement wizard

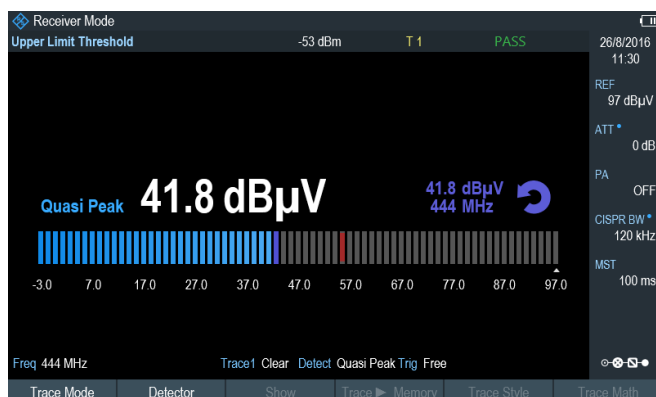

Optional features

- ▶ Preamplifier (R&S®FPH-B22/-B23/-B24/-B25/-B26)
- ▶ Frequency extension down to 100 Hz (R&S®FPH-B29)
- ▶ Analog modulation analysis AM/FM (R&S®FPH-K7)
- ▶ Power sensor support (R&S®FPH-K9)
- ▶ Interference analysis (R&S®FPH-K15)
- ▶ Signal strength mapping (R&S®FPH-K16)
- ▶ Channel power meter (R&S®FPH-K19)
- ▶ Pulse measurements with power sensors (R&S®FPH-K29)
- ▶ Receiver mode (R&S®FPH-K43)
- ▶ Advanced gated trigger measurements (R&S®FPH-K57)
- ▶ EMF measurement application (R&S®FPH-K105)

HIGHER PRODUCTIVITY WITH MEASUREMENT WIZARD

Site surveys or transmitter station installation and maintenance often require a standard set of spectrum measurements. The measurements must be done correctly to avoid additional costs and time on site.

Simplified measurements

The measurement wizard simplifies measurements by automating, standardizing and optimizing test sequences. A sequence of standardized and recurring measurements can be done quickly, easily and error-free.

A measurement expert creates test sequences with the R&S®Spectrum Rider FPH and R&S®InstrumentView on a PC. Pictures and written instructions can be added to each measurement step.

After the measurement sequence is configured, it is transferred to instruments in the field. The operator in the field just needs to start the wizard, select the measurement sequence and follow the predefined on-screen instructions. The instrument is correctly configured for each test step, so that the operator does not need to spend time configuring the instrument on site.

The results are automatically saved as soon as all the measurements are completed, when they can be transferred to a tablet or PC. Complete measurement reports can be generated in PDF, RTF or HTML formats with the report generator in R&S®InstrumentView.

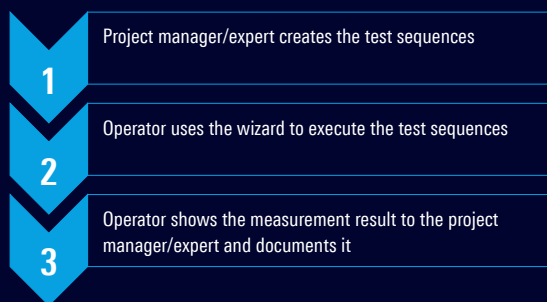

Reproducible and fast measurements

The measurement wizard and the report generator ensure the following:

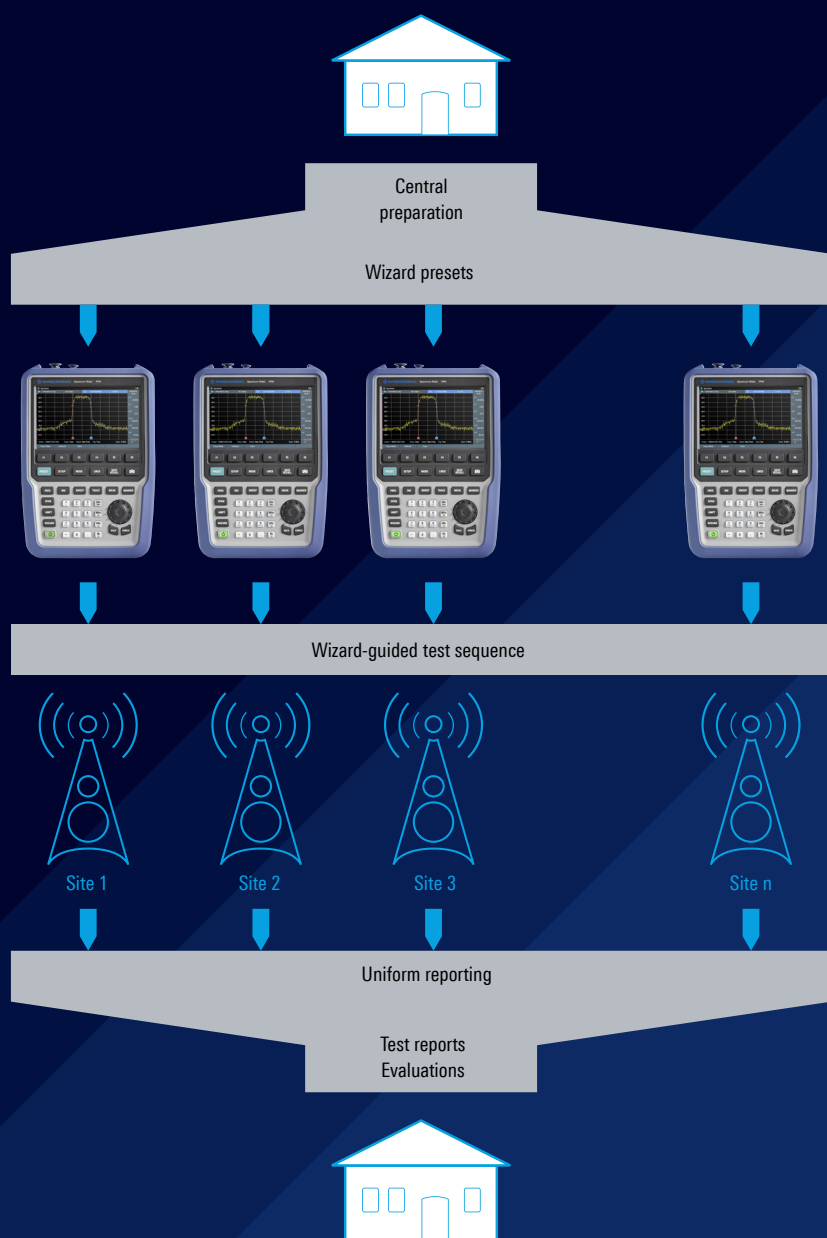

- ▶ The results are correct and reproducible; all measurements are performed correctly with the right settings and in the right order; no need to come back to the site due to incorrect measurement settings or setup.
- ▶ Measurement times are much shorter thanks to predefined settings; the instrument does not need to be set up on site.
- ▶ No training is required for new users; less experienced operators can reliably perform measurements with the on-screen instructions and preset measurement settings.
- ▶ All measurement results are documented in a complete, customizable measurement report, which can include additional data such as operator or site name, company name, location and instrument serial number.

Three simple steps needed to work with the measurement wizard

Typical deployment setup with measurement preparations and postprocessing

POSTPROCESSING AND REMOTE CONTROL

R&S®InstrumentView software for measurement postprocessing and documentation

R&S®InstrumentView software is included with the instrument. It makes it easy to postprocess and document measurement results and manage instrument settings.

Features

- Fast data exchange between the R&S®Spectrum Rider FPH and a PC via USB or LAN connection
- Easy processing of measurement results
- Easy creation of test reports in PDF, HTML and RTF format
- Printout of all relevant data via Windows tablet or PC
- Editing of measurement results by displaying/hiding and shifting markers or limit lines, etc.
- Editor for generating limit lines, antenna factors and transducer factors for external attenuators and amplifiers as well as channel lists
- Compatible with Windows 7 (32 bit/64 bit), Windows 8 (32 bit/64 bit) and Windows 10 (32 bit/64 bit)

Remote control via LAN or USB

The R&S®Spectrum Rider FPH can be remotely controlled via the USB or LAN interface and integrated into user-specific programs. SCPI-compatible remote control commands come standard.

R&S®MobileView app for remote control and file transfer

The R&S®MobileView app allows wireless remote control of the R&S®Spectrum Rider FPH within line of sight. Simply connect a third-party wireless router to the R&S®Spectrum Rider FPH LAN port. Download the R&S®MobileView app from an iOS or Android platform. The app offers seamless remote control of the R&S®Spectrum Rider FPH and conveniently transfers the screenshot and measured result from the device.

¹⁾ Applicable only to base unit with order no. 1321.1111.02.

²⁾ Applicable only to base unit with order no. 1321.1111.06.

³⁾ Applicable only to base unit with order no. 1321.1111.13 or 1321.1711.23.

⁴⁾ Applicable only to base unit with order no. 1321.1111.26 or 1321.1711.36.

⁵⁾ R&S®FPH-B31 option is not available in combination with R&S®FPH-B100 option.

⁶⁾ Applicable only to base unit with order no. 1321.1711.44 or 1321.1711.54.

⁷⁾ For serial number ≥ 103100. Not applicable to R&S®Spectrum Rider FPH model .02.

⁸⁾ The battery charger is to be used for charging an additional battery outside the instrument. The internal battery is charged by the instrument itself.

⁹⁾ Product to be discontinued and replaced by R&S®HA-Z403.
